

Art Donnelly of Seattle Biochar Working Group is teaching a one day class on the principles and practice of biochar production. Students will receive hands-on experience with our 55 gallon J/RO kilns and will perform several burns.

The afternoon session will include biochar sieving, inoculation, and instruction on how to apply it in soil.

Students should bring a sturdy pair of leather gloves and pack their own lunch. Students are also encouraged to bring some of their own dry feedstock with which to experiment.
